According to Gartner, the Customer Relationship Management (CRM) market is drastically increasing. Using an application that integrates your phone system with your CRM and business applications allows you to improve efficiency of calls, save time and increase customer satisfaction.

Why Evolve IP's CRM Integration?

Evolve IP's CRM integration application offers unified communication features for customers that utilize several different CRM and business applications such as Google, Salesforce, MS Dynamics, etc.

Integration between the Evolve IP hosted voice platform and your business applications ensures dramatic productivity gains for your users, while working in the office or remotely. When you bridge the gap between your telephone system and your customer records, CRM integration provides easy-to-use experiences for your users. It provides immediate access to your database with a single click.

Make better use of time speaking with valuable prospects and customers, rather than looking up contact and account information manually in your CRM. Inbound and outbound calls can automatically open contact information in your CRM. Users are also provided the ability to click-to-dial from CRM records, control their phone from their CRM, automatic call logging and much more.

Benefits:

- Seamless integration with Evolve IP's phone system
- Ability to automatically capture every interaction with prospects & customers
- Save time looking for contact details, logging account information, or navigating to your CRM application manually
- Free of any hardware or software maintenance
- Automatically receive enhancements & updates remotely without the need of an IT admin
- Fast and easy deployment with a Chrome add-in extension
- Advanced custom options available for Salesforce
- Allows end users to work more collaboratively and collectively
- Enhances team efficiency and customer satisfaction
