

Mimecast Unified Email Management

Mimecast Unified Email Management provides everything an enterprise needs to better manage its email infrastructure in a ready to use Software-as-a-Service (SaaS) solution.

Mimecast delivers enterprise email management services that include security, continuity and archiving.

BENEFITS AT A GLANCE

- Uninterrupted access to live and historical email
- Anywhere web access to email and calendar information
- Bottomless archiving
- User invoked secure communication
- User assigned email stationary
- Manage personal block and hold lists directly from within Outlook
- Data loss prevention and large file send (optional)

Email is an organization's most important communication platform and the most susceptible to attack from outsiders, data loss and downtime. Through Evolve IP's partnership with Mimecast, customers can build a wall of protection around their organization. Deployed from the cloud, Evolve IP enables customers to focus on implementing the security measures needed without any onsite equipment or mail filtering appliances. And in the case of a planned or an unplanned outage, this service provides easy to implement options for continuous web-based email access, management and use.

Achieving Unified Email Management (UEM) with Mimecast

The ability to continuously protect, store, manage and archive great volumes of email is a key business challenge. While many organizations have implemented Microsoft® Exchange and other collaboration tools for business-critical messaging, over time, new threats and data governance issues emerge, which require additional functionality to be added onto the original messaging platform. The entire email infrastructure becomes too costly to manage, maintain and upgrade, even for the most well-equipped IT departments.

Mimecast changes this picture completely. It provides everything an enterprise needs in a ready-to-use Software-as-a-Service (SaaS) solution, removing the growing risks and complexities of business email management with a single platform. Better yet, it comes at a fraction of the cost of alternative strategies, saving companies as much as 60% in ongoing costs.

Connecting a corporate email server to Mimecast delivers critical software services as well as the physical network, computing and storage infrastructure needed to deliver comprehensive Unified Email Management.

Mimecast allows an organization's IT members to shift their focus from the unproductive management of the individual technical components to the wider business needs of their organization.

Mimecast removes spam and malware threats before they reach your network and enforces email content policies and secure communication methods to protect sensitive data.

Email Security and Continuity

All inbound, outbound and internal email is stored in Mimecast's resilient and secure archive in accordance with centrally managed retention policies. Unique integration with Outlook offers users a bottomless mailbox and uninterrupted email should your corporate email systems fail. All service functionality is managed from a single administration console with no additional on-premises hardware required, significantly reducing the overall complexity of managing your email.

How it works

Simple to deploy, simple to manage

- Point corporate MX records to Mimecast
- Historical email can be ingested into the Mimecast archive (at an additional cost per MB)
- Route all outbound traffic through the Mimecast platform
- Securely connect Mimecast to your Active Directory for user authentication
- Inbound and outbound email is automatically retained in the archive
- Use Microsoft Exchange Server journaling to securely transfer all email to the Mimecast archive
- Spam and malware is automatically removed by Mimecast's multiple layers of protection
- Administrator defined email content policies are applied
- Optionally deploy Mimecast's application for Exchange for extended mailbox functionality
- Access all email management functionality from a single administration console

Mobile user access to Mimecast

- Mimecast provides apps for all major mobile devices. Users simply download the relevant mobile app to view and search their Mimecast archive, control security settings and access their email if primary email systems are unavailable

Outlook email continuity, personal archive access and secure email gateway

- Mimecast Outlook client application optionally installed
- End users can search their personal archive directly from Outlook
- When Exchange is offline, the Mimecast Outlook client automatically sends and receives email via the Mimecast service
- Once Outlook has reconnected to Exchange, the Mimecast Outlook client automatically synchronizes with Exchange and removes duplicate messages
- Email encryption, document metadata removal and conversion, email stationery, all available in Outlook

Mimecast Personal Portal email continuity

- Simply inform users of the Mimecast Personal Portal URL
- Users have secure access to live and historical email and calendar information from any web browser

UNIFIED EMAIL MANAGEMENT

Mimecast Unified Email Management (UEM) offers organizations the unique benefits that only a truly integrated email management solution can.

Because Mimecast manages all messages in transit and at rest, strong chains of custody are maintained, and maximum security is ensured.

During local outages, email security policies continue to be enforced and users have access to live and historical email.

Unified email security and archiving data can add context in the event of a security breach, helping to determine intent as well as activity.

Mimecast offers email security, continuity and archiving services individually or as part of a Mimecast UEM service.

Mimecast UEM Express:

Email security and continuity with access to 58 days of historical email.

Mimecast UEM Enterprise:

Email security, continuity and archiving with an unlimited default data retention period.

Email Security and Continuity

Features

The chart below illustrates the features included with Evolve IP's Email Security and Continuity offerings.
